RAUVISIO grip

Everything in its place

RAUVISIO grip

RAUVISIO grip is an innovative solution to the problem of keeping order in large, deep drawers without dividers, for example in drawers for saucepans and dishes. To meet the needs of its customers, REHAU has developed a system solution for this long-standing problem. We have designed a material that has all the advantages of anti-slip mats and at the same time considerably simplifies the process of manufacturing a drawer.

Everything stays in its place

RAUVISIO grip is an anti-slip panel consisting of several polymers and is permanently bonded to a chipboard panel – a finished product that is suitable for use as a drawer bottom or back. The panel material only needs to be cut to the desired size and fitted.

The elastomer top layer prevents the objects stored in the drawer from shifting. The base layer is made of chipboard and forms the drawer bottom.

The adhesion of the objects in the drawer is achieved by static friction between the stored object and the mat layer. This static friction is so high that even in drawers without a silent closing system RAUVISIO grip prevents the stored objects from moving when the drawer is closed quickly.

Faster, quieter and more comfortable

The permanent bond between the anti-slip mat and the carrier plate reduces the number of process steps required to manufacture a drawer. We thus offer the customer a product that meets even the most demanding requirements.

By eliminating vibrations of the objects stored in the drawer and preventing them from moving, a drawer equipped with RAUVISIO grip can be closed much more quietly.

The surface of the mat used with RAUVISIO grip is easy to clean. Thanks to the properties of the material, it also improves the waterproofness of the drawer filling.

Durability

The anti-slip panel is made of durable polymers that are permanently bonded during the manufacturing process.

Variety

The anti-slip panels are available in graphite and white and are sold as finished 16 mm panels.

Easy production

To assemble the drawer, it is only necessary to cut the material to the desired size and fix the bottom in the drawer. The panel is supplied in large format and can then be cut to any size.

Aesthetics

Trendy carbon-diamond decor

Universality

RAUVISIO grip can be used with almost all drawer types of the kitchen with a 16 mm bottom panel and in any type of drawer in other furniture solutions, whether in bathrooms or offices.

Practicability

The anti-slip mat also provides protection against moisture. It is easy to clean and UV-resistant.

Comfort of use

The pleasantly soft but also durable surface increases the comfort of everyday use of the drawers. The panel can be cut to any size.

Colour collection:

Graphite: 154367
Edgeband: 98492

White: 91426
Edgeband: 91426

Decorative design: fine carbon-diamond decor

Technical data:

Panel thickness: 16 mm
Mat thickness: 1 mm
Panel dimensions: 2,040 x 1,150 mm
