Kitchen for detached house in Gauja Valley,
Latvia

Three shades of black

Sigulda is the gateway to Latvia's Gauja National Park. A prestigious project by kitchen designers AB Virtuves lies hidden in the beautiful Gauja valley. The owners of the house combined a modern architectural style with the surrounding's colours and materials. The open-plan room concept leaves plenty of scope for customised material combinations. The concrete look, real wood elements and stone are crucial elements of the interior design.

The kitchen blends seamlessly into the purist interior of exposed concrete and warm wooden floorboards. Black in different materials, textures and structures forms the central theme. The fronts of the kitchen furniture were designed with the RAUVISIO brilliant SR lacquer laminate in a matt and have a scratch-resistant finish. This makes them easy to maintain, insensitive to scratches and, thanks to the laser processing of the edgebands, achieves a total seamless integration. Spacious drawers with integrated recessed grips turn the homogeneous front into an object of perfection, whilst the flexible storage compartments equipped with RAUVISIO grip, an anti-slip panel integrated into the base, are concealed behind them. As worktop and eye-catcher, the designers chose a black, sophisticated quartz surface with white marble veins. Bar counters and shelves form the third shade of black with elements of lacquered oak veneer.

A highlight is the BORA hob with recessed extractor hood directly in front of the window. Nothing obstructs the view of the wonderful landscape.
